

CERTIFICATE OF COMPLIANCE

Persistent Organic Pollutants (POPs)

Persistent Organic Pollutants (POPs) are chemical compounds that can be found in certain types of consumer products, such as apparel & textiles, upholstered furniture, and electronic components. POPs are restricted in the EU under the POPs Regulation.

RFE International, Inc. has reviewed the EU POP directive number (2019/1021); including latest amendment (EU) 2025/1482 and the substances listed in Annex I – Prohibited POPs, such as UV-328 and Dechlorane Plus. We certify that, to the best of our knowledge, all product series are free of intentionally introduced POPs and comply with all specifications established in the Stackpole Electronics, Inc. catalog.

We are committed to ensuring continuing compliance with hazardous substances initiatives such as RoHS, REACH and POPs. We will continue to monitor any changes to the related legislation.

If you have questions about our compliance with any other regulatory statutes, please contact your RFE customer service representative.
